Probability (basic and Intermediate) Graded Quiz

LATEST SUBMISSION GRADE

1	100%					
1.	What additional statement, added to the three below, forms a probability distribution?	1/1 point				
	(1) I missed only my first class today					
	(2) I missed only my second class today					
	(3) I missed both my first and second class today					
	✓ Correct					
2.	My friend takes 10 cards at random from a 52-card deck, and places them in a box. Then he puts the other 42 cards in a second, identical box. He hands me one of the two boxes and asks me to draw out the top card. What is the probability that the first card I draw will be the Ace of Spades?	1/1 point				
	✓ Correct					

(1) "It will go sailing today" (2) "It will not rain today" Correct 4. The probability that I will go sailing today AND the fair six-sided die will come up even on the next roll is .3. If these events are independent, what is the probability that I will go sailing today? Correct 5. I have two coins. One is fair, and has a probability of coming up heads of. 5. The second is bent, and has a probability of coming up heads of. 75. If I toss each coin once, what is the probability that at least one of the coins will come up tails?			
(2) "It will not rain today" Correct 4. The probability that I will go sailing today AND the fair six-sided die will come up even on the next roll is .3. If these events are independent, what is the probability that I will go sailing today? Correct 5. I have two coins. One is fair, and has a probability of coming up heads of. 5. The second is bent, and has a probability of coming up heads of. 75. If I toss each coin once, what is the probability that at least one of the coins will come up tails? Correct 6. What is the probability, when drawing 5 cards from a fair 52-card deck, of drawing a "full house" (three of a 1/1 pol)	3.	I will go sailing today if it does not rain. Are the following two statements Independent or dependent?	1/1 point
4. The probability that I will go sailing today AND the fair six-sided die will come up even on the next roll is .3. 1/1 pol If these events are independent, what is the probability that I will go sailing today? Correct 5. I have two coins. One is fair, and has a probability of coming up heads of.5. The second is bent, and has a probability of coming up heads of.75. If I toss each coin once, what is the probability that at least one of the coins will come up tails? Correct 6. What is the probability, when drawing 5 cards from a fair 52-card deck, of drawing a "full house" (three of a		(1) "I will go sailing today"	
4. The probability that I will go sailing today AND the fair six-sided die will come up even on the next roll is .3. If these events are independent, what is the probability that I will go sailing today? Correct 5. I have two coins. One is fair, and has a probability of coming up heads of.5. The second is bent, and has a probability of coming up heads of.75. If I toss each coin once, what is the probability that at least one of the coins will come up tails? Correct 6. What is the probability, when drawing 5 cards from a fair 52-card deck, of drawing a "full house" (three of a		(2) "It will not rain today"	
If these events are independent, what is the probability that I will go sailing today? Correct I have two coins. One is fair, and has a probability of coming up heads of.5. The second is bent, and has a probability of coming up heads of.75. If I toss each coin once, what is the probability that at least one of the coins will come up tails? Correct What is the probability, when drawing 5 cards from a fair 52-card deck, of drawing a "full house" (three of a		✓ Correct	
If these events are independent, what is the probability that I will go sailing today? Correct I have two coins. One is fair, and has a probability of coming up heads of.5. The second is bent, and has a probability of coming up heads of.75. If I toss each coin once, what is the probability that at least one of the coins will come up tails? Correct What is the probability, when drawing 5 cards from a fair 52-card deck, of drawing a "full house" (three of a			
 Correct I have two coins. One is fair, and has a probability of coming up heads of 5. The second is bent, and has a probability of coming up heads of 75. If I toss each coin once, what is the probability that at least one of the coins will come up tails? Correct What is the probability, when drawing 5 cards from a fair 52-card deck, of drawing a "full house" (three of a 1/1 point) 	4.	The probability that I will go sailing today AND the fair six-sided die will come up even on the next roll is $.3.$	1/1 point
5. I have two coins. One is fair, and has a probability of coming up heads of.5. The second is bent, and has a probability of coming up heads of.75. If I toss each coin once, what is the probability that at least one of the coins will come up tails? Correct 6. What is the probability, when drawing 5 cards from a fair 52-card deck, of drawing a "full house" (three of a		If these events are independent, what is the probability that I will go sailing today?	
The second is bent, and has a probability of coming up heads of 75. If I toss each coin once, what is the probability that at least one of the coins will come up tails? Correct What is the probability, when drawing 5 cards from a fair 52-card deck, of drawing a "full house" (three of a 1/1 point).		✓ Correct	
6. What is the probability, when drawing 5 cards from a fair 52-card deck, of drawing a "full house" (three of a	5.	The second is bent, and has a probability of coming up heads of 75.	1/1 point
		✓ Correct	
	6.		1/1 point
✓ Correct		✓ Correct	

7. If it rains, I do not go sailing. It rains 10% of days; I go sailing 3% of days.	1/1 point
If it does not rain, what is the (conditional) probability that I go sailing?	
Written "p(I go sailing it does not rain)"?	
✓ Correct	
$^{8\cdot}$ Tam at my office AND not working 2% of the time. Tam at my office 10% of the time. What is the conditional probability that Fam not working, if Fam at my office?	1/1 point
✓ Correct	
9. The factory quality control department discovers that the conditional probability of making a manufacturing mistake in its precision ball bearing production is 4% on Tuesday, 4% on Wednesday, 4 on Thursday, 8% on Monday, and 12% on Friday.	%
The Company manufactures an equal amount of ball bearings (20%) on each weekday. What is the probability that a defective ball bearing was manufactured on a Friday?	
✓ Correct	
10. An Urn contains two white marbles and one black marble. A marble is drawn from the Urn without replacement and put aside without my seeing it. Then a second marble is drawn, and it is white.	1/1 point
What is the probability that the unknown removed marble is white, and what is the probability that it is black?	
✓ Correct	

11. What is the probability, if I flip a fair coin with heads and tails ten times in a row, that I get at least 8 heads?

1/1 point

 $^{12\cdot}$ Suppose I have either a fair coin or a bent coin, and I don't know which. The bent coin has a 60% probability of coming up heads.

1/1 point

I throw the coin ten times and it comes up heads 8 times. What is the probability I have the fair coin vs. the probability I have the bent coin?

Assume at the outset there is an equal (.5,.5) prior probability of either coin.

*Please note that in order to fit the entire formula in the feedback, probability has been abbreviated to "prob."
